

Why are you trying to build a package?

---

## Why are you trying to build a package?

- ▶ To store your favourite customised functions (SmokyScotch)?
- ▶ ~~CITE MY PAPER!!~~ Service to the community (scMerge, APES, mcvis).
- ▶ Building a package is more than just coding.
- ▶ Designs, organisations, dependencies, testing and debugging.
- ▶ Don't do a package unless you are sure of the ROI of your time.

---

## Building a package is easy

1. Write your code using roxygen2.
2. `devtools::check() + BiocCheck::BiocCheck()`.
3. Submit to Bioconductor on GitHub, and pass the human review.
4. Make a Bioconductor git repository and push it here when the time comes.
